

- What did you learn from this internship?

I learned about the archiving process. I learned how to process collections. I know how to digitize information and convert metadata. I know how to design digital and physical exhibits. Also how to scan and photograph for collections.

- How was your internship experience different from what you expected?

I honestly didn't think I'd get as much out of it as I did. I now have a direction for my thesis, and career hopefully.

- Briefly describe your experience with the Humboldt Library, as an academic resource, prior to your internship, and then how you perceive its resources now.

I think I was intimidated by everything that was available to me beforehand, just because I didn't really know how to navigate it. But now I see the scope of what resources are available to me and it's comforting as I head into my graduate career.

- Have your career goals changed based on your experience with this internship? If so, how?

Yes! I want to work in archiving!

- Anything else?

10/10! Thank you so much! This was such an incredible opportunity and I'll remember it always! :)
